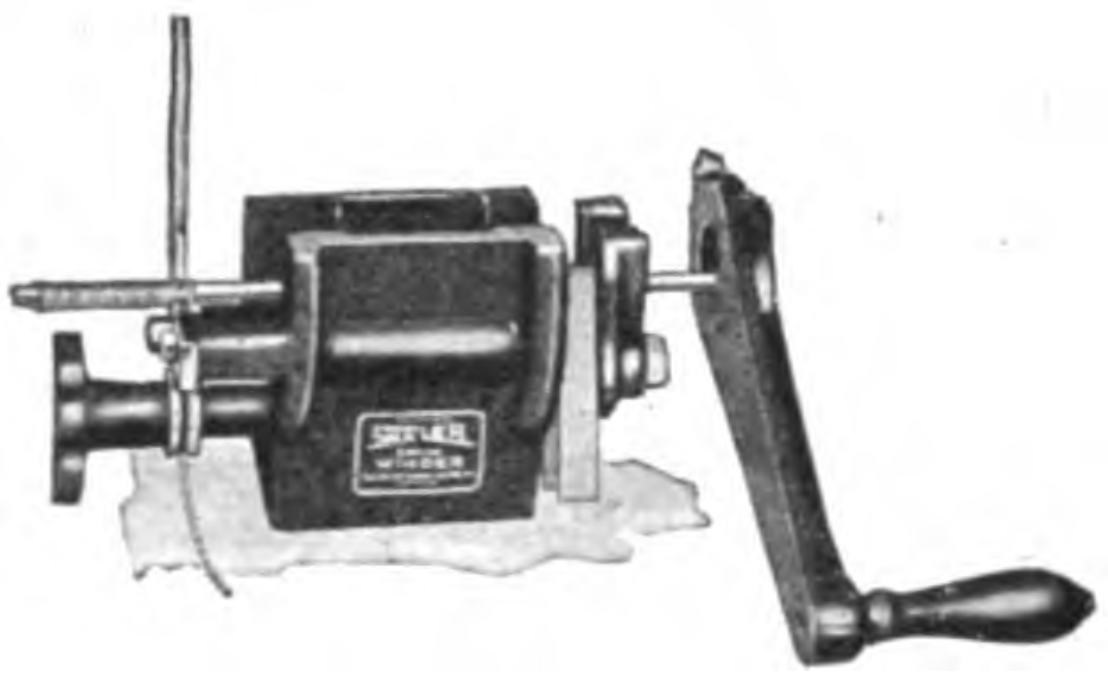
Shaler Spring Winder

A NEW device which enables the mechanic to make any type of coil spring in a few minutes has just been placed on the market by The Shaler Company, Milwaukee, Wis.



The process of making is simple. A piece of spring wire is inserted in the machine and the handle turned until the desired length is reached. Pull or compression springs can be made up to 1⅞" in diameter and in any size wire, it is claimed.

The winder is sold through jobbers, at $9.75, complete with five arbors and three rolls of wire. Further details on request.
